

Coding assignment for a Java Developer position in Your.MD

The task

Create a REST micro-service in Java/Groovy that takes as input a string parameter and returns a list of matched phrases from a dictionary list.

The test dictionary is located here:

<https://github.com/YourMD/data/blob/master/phrases.zip?raw=true>

Example usage:

Input: *I have a sore throat and headache.*

Output: [*sore throat*, *headache*]

Requirements:

- Use Spring Boot
- Use Gradle
- The project's structure and organization should follow the best practices
- The code should be production-ready
